FIRE RETARDANT

Discover the difference with our new collection!

Sit back, take your time to leaf through this brochure and let yourself be inspired. From modern to classic and across a range of categories, here you will find our Woodfibre range: the solution for facades and decking, without compromising on quality.

As a European manufacturer we know what you as a customer want, and we move with the trends of our time.

For advice, contact a dealer directly (see our website) or WoodMart Group B.V.

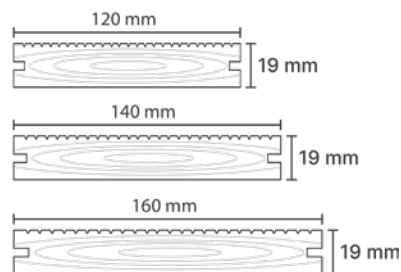

A particular favourite is this solid Woodfibre Multicolor board. It is unique because the wood grain runs through its entire thickness. That means it can be worked just like wood: milled, engraved, sanded or planed, all without compromising on quality or durability.

Multicolor comes in 8 unique shades: from Snow White to Grey, Light Maple, Sand, Mahony, Cedar and Teak through to Wengé. In a classic setting or modern architecture, this Bruggan Woodfibre board fits everywhere; available as a decking board (19 mm thick) and as wall and facade cladding (as a 12 mm open facade or 17 mm tongue and groove).

Pick up a Bruggan board and you will feel and see the difference straight away: this is premium quality, unique on the market!

25 YEARS OF
GUARANTEE

Discover our collection of Woodfibre facade cladding, as panels and as the popular Rhombus slat. A special technology gives a true-to-nature colour that is highly UV resistant and dirt repellent, which is why we offer a full 25-year guarantee on it.

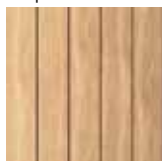

The facade cladding is lightweight yet structurally very stable, and meets all requirements for residential construction and renovation. The fixing system is quick and provides the right pull-out strength.

A detailed installation manual is of course available, one that even the professional will feel completely at home with.

Alongside the 4 standard colours Maple, Teak, Walnut and Basalt, a complete Burned Wood series is now also available, together with the open facade board and the decking board; it too is extremely low-maintenance and dirt repellent.

Walnut

Basalt

Burned Wood & Light Maple

Projects out of the ordinary call for a special range, one that dares to go a step further. And once again we have succeeded: an original, natural look with plenty of character.

Light Maple: friendly, attractive, a board you want to touch. With a grain that looks freshly sawn.

Burned Wood: bold and rugged, a board with real character that has a story to tell.

Both are not only beautiful but also extremely durable, dirt repellent and, like our entire range, virtually maintenance-free.

For facades and decking, with the almost self-evident 25-year guarantee.

Vintage RABAT

WoodMart facade cladding includes a range of overlapping weatherboard profiles with an authentic vintage wood texture, in deep black as standard and also available in other colours to order.

For larger projects the boards can be supplied cut to length, saving a great deal of time and waste.

Our range is European certified, has a fire classification under the European standard and is therefore used in the Netherlands in residential construction and renovation (see also our technical product sheets with all specifications).

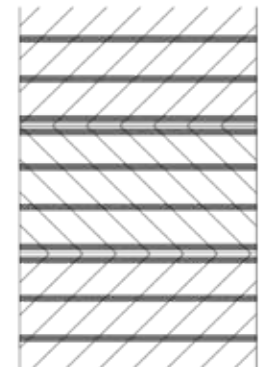

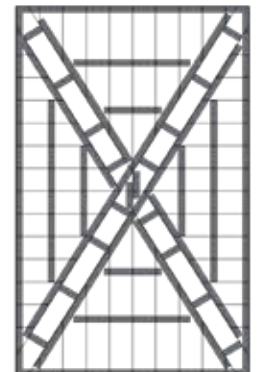

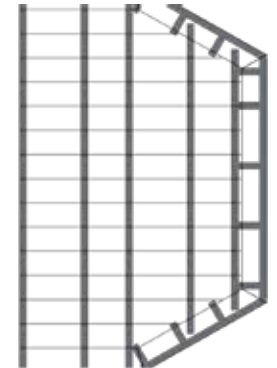

Installation

With our systems, decking and facade cladding are installed quickly and easily. Installation instructions are of course available from your dealer, from us on request, or to download from our website.

Professional installation is of course the basis for years of trouble-free enjoyment. That is why installation teams are also available for professional fitting.

SHORT DIAGRAM OF VERTICAL INSTALLATION OF FACADE BOARDS

Accessories

Correct installation and finishing start with the right accessories and tools. Here too, you have come to the right place.

The traditional timber substructure for decking and the battens for facade cladding are increasingly being replaced by durable composite and aluminium alternatives. These used to be more expensive, but with the scarcity that has arisen and rising requirements and labour costs, our systems are well worth considering. The aluminium substructure is installed in a single layer with a quick click system. We also have the right system for heavy-duty applications.

And now there is our ProClip: super-fast installation, durable and practical. If you ever want to remove a board, you can do so without first taking apart half the deck.

For stairs there are special step boards to match the Bruggan, Classic Elegance and Classic Pro collections. We also offer a range of corner and finishing profiles, of course in the same colour and texture. There are also special edge profiles for around the pool which, thanks to a particularly stable double fixing, stop water and dirt getting underneath.

Ask one of our dealers for advice: with our many years of experience we know the right solution!

25 YEARS OF
GUARANTEE

Guarantees

As a manufacturer and supplier we believe in our premium WoodFibre range, backed by almost 20 years of knowledge and experience. That is why we can confidently offer up to 25 years of product guarantee, on both durability and colour.

Our Woodfibre range has high-quality UV protection and is also dirt repellent in several respects. Algae, moisture absorption and of course rot are ruled out. Bruggan Multicolor also features our latest technology, so stains from pen, paint or wine, for example, can simply be sanded away, without damage and while keeping the durability of the board and its surface.

Our vision of circular sustainability

We know where the raw materials we use come from, so we can guarantee a consistent composition every time. We only use raw materials that can be reused again and again. Plastics such as **PVC**, which are hard to recycle and contain plasticisers and/or metals, are **explicitly excluded**.

Our products are therefore **FSC certified**. We also offer our own **take-back guarantee** for clean product at the end of its life. We deliberately do not work with outside partners for this, as that would risk an impure mix of raw materials.

In summary

- Made of 70% recycled hardwood (oak, beech), with properties similar to hardwood and, thanks to added recycled polymers, an extremely durable and maintenance-free product.
- The range is PVC-free, made only from pure recycled raw materials of known origin, and FSC certified.
- Weather resistant (-60 to +80 degrees) and does not heat up like plastic.
- Moisture resistant (virtually no absorption) and therefore far more durable than wood.
- High load-bearing capacity thanks to the patented composition of the WoodMart Woodfibre range, up to 5,500 kg/m² (Multicolor 19 mm).
- Not susceptible to pests thanks to its closed cell structure.

- The decking boards are designed to keep the risk of slipping to a minimum. The profile and composition of the walking surface demonstrably meet the applicable NEN standards.
- Quick and easy to install: the logical choice for the professional. The WoodMart range has been used for many years in projects across Europe and the USA.
- The range has fire classification B under the European standard (B-s1-d0) and therefore meets the requirements for residential construction and renovation.

FIRE RETARDANT
